🌐 [github](#) [in linkedIn](#) 🌐 [web](#) 📁 [leetCode](#) ✉ [email](#) 📝 [blog](#)

Technical leader with 10+ years of experience designing large-scale distributed systems and data platforms at global scale. Working across disciplines to deliver strategic impact.

Professional Experience

Lead Software Engineer at ethon.ai Zurich, Switzerland November 2025 - Present
Platform team lead (6 engineers). Owning MLOps and data, serving vision, time-series anomaly detection, and causal inference teams.

- Redesigned company-wide data integration: Introduced a scalable, EKS-based, and configurable worker paradigm that decreased the effort of FDEs from days to hours and expanded the product to new markets.
- Established platform standards for raw data parsing and loading pipelines, allowing composable pre-/post-processing and inference. Support for 100+ data and metadata tables.
- Architected infrastructure for fine-tuning vision foundation models using PyTorch and AWS Batch. ([DINO](#), [SAM 2](#))
- Designed and led implementation of vision inference pipelines with FastAPI, Kubernetes, and [Triton](#) (point-to-region, region type identification, anomaly detection/classification) - 2ms runtimes.
- Provided technical leadership and oversight for the migration from legacy single-node docker-compose deployments to Amazon EKS, defining deployment, scaling, and operational patterns adopted across teams.
- Guided the architecture of a distributed ML experimentation and evaluation platform (hundreds of datasets) using [DVC](#), AWS Batch (GPU) with experiment tracking via [mlflow](#).
- Drove database optimizations for: compression (up to 90%+ or $\approx$ \$200 savings per customer), query runtimes for training data retrieval (minutes to seconds), continuous aggregates using materialized views, [CloudNativePG](#) using [pgpool-II](#) routing, passive/active and read/write nodes.
- Defined engineering & hiring standards by conducting 40+ technical interviews.

Senior Software Engineer at ethon.ai Zurich, Switzerland June 2024 - November 2024
MLOps and data on computer vision pipelines. Member of the visual quality inspection team.

- Designed and led the implementation of a distributed system for exchanging vision models and anomaly detection results between training servers and edge devices using [MQTT](#) and different NFSs(e.g. [RustFS](#)) for on-premise and cloud deployments.
- Extended customer-facing vision workflows (Angular) to support ROI monitoring, defect heatmaps, annotations, and model evaluation, improving usability and transparency of ML predictions.
- Redesigned vision data storage architecture and reduced storage footprint by 40%.
- Drove improvements to testing infrastructure: UI unit testing, revised integration test framework.

Python Go Timescale Flask TensorFlow ONNX Hydra CUDA Docker [kind](#) [Gradio](#) GCP
[Buildkite](#) Argo

Senior Software Engineer at 1PlusX/TripleLift Zurich, Switzerland May 2020 - April 2024
Data management and analytics platform providing multi-dimensional batch and real-time user tracking and profiling. Data consolidation and Audience teams.

- Led multi-sprint/multi-quarter and cross-team data projects: Mentoring small groups of developers while resolving ambiguity with non-engineering dependencies such as legal, product, customer success, and external clients.
- Real-time data ingestion ECS infrastructure able to accommodate 7.5M unique events per second on a 30-node Kafka cluster.
- Created or maintained 50+ unique data pipelines running on production systems with 2PB+ of daily traffic (spawning 30-40k Spark jobs daily). Orchestrated using [Luigi](#). Running on EMR on EKS (or EC2).
- Designed and maintained Terraform-based infrastructure for hundreds of AWS services.
- Tag manager - [Play](#) - ingestion restructuring resulting in a dataset size decrease of up to 80% - while maintaining targeting quality.
- Decreased pipeline runtime up to 15% by introducing batch [Akka](#) API endpoints.
- Defined contracts between data engineering and ML teams, reducing iteration cycles and schema drifts.

- Cross-team user ID storage optimization resulting in up to 20% decrease in Couchbase loads. Load on external APIs was decreased up to 40%.
- Data privacy pipelines: Access and deletion requests' handling of multiple protocols (GDPR, CCPA).
- DSL design for ETL ops: Rich syntax for creating and combining attributes.
- E2E user tracking: From cookies and browser-side Typescript SDKs to graph-based ID management.
- Angular 2 work on analytics dashboards, widgets, data pipeline builder.

Scala Java Go Python Redux ECR RDS s3 CloudWatch Docker **Packer** Grafana
InfluxDB DynamoDB PostgreSQL Databricks Elasticsearch OpenSearch

Software Engineer at Veezoo AG Zurich, Switzerland March 2019 - May 2020

*NLP platform providing analytics through a variety of corporate data source integrations - namely Oracle, MySQL, PostgreSQL, Salesforce, **IBM DB2**, Hadoop, SAP HANA - using a QA interface.*

- Developed and owned data onboarding automation from raw data to **Apache Jena**: Knowledge graph ontology representations API for (non)-relational data sources.
- Semantic parsing pipelines for natural languages (bag of words to logical forms to SQL generation).
- Extend and maintain the **Duckling** language engine written in Haskell.

Scala Play Solr Docker OpenShift

Software Engineer at Locatee AG Zurich, Switzerland April 2017 - March 2019

Analytics platform providing hyper-location, real-time workspace occupancy insights and, predictive APIs through geospatial data scraping (SNMP protocol).

- Led the modularization of the core **Spring** Java 8 app monolith. From creating three distinct services - Analytics API, Data processing service, and pollers - to POCs and eventually to global roll-outs.
- Online data distillation pipeline detecting outliers on workspace behavior and identifying team collaboration coefficients.
- Different MySQL read/write optimizations for measurements post-processing

InfluxDB Tableau Neo4J Kafka Python Jupyter Pandas Docker

Software Engineer at Upstream Systems SA Athens, Greece October 2014 - March 2017

Green-field project re-engineering the core CRM monolith as a fully distributed system. The implementation included a multitude of APIs for data streaming and job scheduling accommodating thousands to millions of transactions daily.

- Developed asynchronous event-driven services on distributed environments using Guava and RabbitMQ.
- Implementation of Elasticsearch user samplers via Groovy scripts and custom treemap algorithms. Stretch testing, benchmarking, and performance tweaking on Elasticsearch operations.
- Performance profiling (**Dropwizard's** Metrics, YourKit, Grafana, and other tools).
- **Spring Boot** API versioning (URL & Resource Representation).
- Batch job framework implementation with RabbitMQ and **Quartz**. Throttling and flow control features included.
- QA Automation framework (Selenium, Spring).
- **Recommendation engine** using Mahout and supervised learning regression algorithms (Log Likelihood Similarity for item-based recommender and Pearson correlation similarity for user-based recommender).

Java 8 Spring JPA TestNG PostgreSQL EhCache **flyway** Hibernate **Camel** Kafka Spark
Redis Docker Ansible Protobuf

Software Engineer at Accenture Athens, Greece June 2014 - September 2014

Provisioning and mediation over Oracle databases and mobile telecom software.

TOAD **SQL Developer** **WebLogic**

Other Works

- Designer and developer of a [B+ indexed RDBMS in C](#).
- Co-creator of a [social network](#) based on node.js and socket.io. The network provided real-time chatting and financial transactions between users.
- Prototypes for content moderation and text search using Flask and FastAPI. [\[1\]](#) [\[2\]](#)

Education

Degrees

September 2013	M.Sc. in Computer Science Department of Computer Science, National and Kapodistrian University of Athens - 7.49/10 or Upper Second-Class Honours
----------------	--

Languages

Greek	Native
English	Certificate of Proficiency in English, University of Cambridge, Grade A Certificate of Proficiency in English, University of Michigan, Honors
German	B1
French	Diplome d'etudes en langue Francaise (DELF)

Conferences

- [MLOps World](#) 2025
